

Dr. Grant Woods
www.growingdeer.tv

"Eagle Seed forage soybeans are absolutely the best crop I've ever planted for deer. They produce literally tons of high quality forage throughout the growing season, and can produce huge crops of bean pods for deer to consume during the winter. I use them as a year round food source for deer and other wildlife. The cost per pound of food produced is less than any other crop I've tried."

Dr. Woods, a world-renowned wildlife biologist, plants Eagle Forage soybeans on his Proving Grounds in the rocky hill country of Missouri.

Eagle Seed Soybeans are the Preferred Food Plot for Deer.

State wildlife directors and professional wildlife managers across the United States plant Eagle Seed Forage Soybeans. We are the nation's leader in Soybean Biomass. Our varieties provide the longest growing season, twice the plant height, three times the leaf area, and the highest protein.

Up to **3** times **BIGGER LEAVES**
mean more **FOOD**
for your deer.

EAGLE SEED

ALL THE EXPERTS AGREE:

**PLANT EAGLE SEED
FORAGE SOYBEANS,
THEY ARE THE
HIGHEST IN PROTIEN
AND TONNAGE, EASIEST
TO GROW, AND
ATTRACTIVE TO DEER
OVER MULTIPLE
SEASONS.**

Wildlife Manager's Mix RR™

This blend was originally developed for our northern customers. We now have three selections based on your geography: **Northern**, **Midwestern**, and **Southern**. Use the USDA map below to choose the blend most suitable to your growing region. Wildlife Manager's Mix RR is a custom, niche blend containing forage types, climbing soybeans, and soybean varieties that are tall, high-yielding and broadly adapted for your geography. The blend features four maturity groups which mature at different times and allow the deer to feed on both mature soybean and green leaf tissue. You will get high tonnage, excellent browse tolerance and great seed yield, all in one bag.

Whitetail Thicket RR™, is a Roundup Ready climbing soybean known for its excessive branching and tonnage production. Whitetail Thicket is available in Wildlife Manager's Mix RR and Game Keeper RR.

Game Keeper RR™

Game Keeper is our most popular food plot blend for lower mid-western and southern customers because it provides the longest growing season. This special blend contains Big Fellow, Large Lad, and the World's First and only Roundup Ready Climbing soybean, Whitetail Thicket RR™. Whitetail Thicket RR™ is known for its amazing branching, vines up to 10 feet in length, and the long-green season it provides.

Whitetail Thicket RR™ is an indeterminant group 8+ soybean with amazing drought tolerance and the ability to handle less than ideal soils.

Large Lad RR™

Large Lad is known for its excellent seed yield and tonnage production. Large Lad plants can reach heights of 84 inches and provide excellent forage for deer and cattle. Large Lad is a favorite of deer hunters since it stays green longer, and has higher protein than regular soybeans. Large Lad is easy to grow and has resistance to many foliar diseases, root rots, stem canker and races of nematodes. The forage varieties listed on this page are widely adapted to numerous soil types and can withstand tougher growing conditions than regular soybeans. Large Lad is also available in the deer blends, Game Keeper, Wildlife Manager's Mix, and Habitat Haven. The deer blends are formulated for specific growing regions and can produce seed in even the most northern and southern regions of the United States.

Big Fellow RR™

Big Fellow is an extremely tall, very large leafed Roundup Ready forage variety. It has been tested in numerous university trials and is an outstanding high protein, high tonnage producer. Big Fellow is also known for its drought tolerance and indeterminate growth habit which makes it truly rare. It can keep growing through heavy browsing by cattle or deer. It continues providing excellent nutrition later in the year after other varieties have completed their life cycle.

Big Fellow is the superior food for deer and cattle. Big Fellow puts on more than twice as many nodes as a regular soybean. Big Fellow's extra nodes provide more height, tonnage, leaf area, and browse tolerance. This variety is a favorite of silage growers since it has very high feed value, equal to alfalfa. It has excellent seed yield and is also available in the blends Wildlife Manager's Mix, Habitat Haven, and Game Keeper.

Buy Eagle Seed Varieties to Ensure Maximum Performance.

Eagle Seed Varieties Are #1 because they are rigorously tested on the toughest growing sites and in the highest yielding environments. They receive yield, planting date, row spacing, soil, biomass, state, and university testing in at least 25 locations. They are battle tested to provide the best yield and most comprehensive disease resistance.

“They’re Awesome”

-Dr. Atkinson, SIU,

- University Research Proven
- Food Most Preferred by Deer
- Easy to Grow
- Up to 42% Leaf Protein
- Heights up to 84 inches
- Best Browse Tolerance
- Up to 9.6 Tons of Food Per Acre
- Stays Green up to First Frost
- Greatest Drought Tolerance
- Excellent Cover for Deer Habitat
